

About North Carolina Sustainable Energy Association

North Carolina Sustainable Energy Association (NCSEA) is the leading 501(c)(3) non-profit organization that drives public policy and market development for clean energy.

Mission: Our mission is to drive policy and market development to create clean energy jobs, economic opportunities, and affordable energy that benefits all of North Carolina.

Our Story

For over forty years, our mission-driven business model has furthered the transformation of North Carolina energy policy, markets, and systems that drive an affordable, resilient, and secure clean energy future. Since NCSEA was founded in 1978 amidst the oil crisis, our impact and investment has continued to grow to confront the most pressing issues in the energy space. We remain committed to transparent education, forward-thinking policy, and innovative technology.

Today, we work with a community of members and partners to advance the clean energy system of our state and region through market innovation and policy advocacy. Our network is comprised of businesses, academic institutions, municipalities, non-profits, and individuals who are committed to creating an inclusive and accessible clean energy future in North Carolina.

Policy and Regulation

Policy and regulation are integral components of NCSEA's work. Our policy team works with members, donors, and partners to advance clean energy policy and regulation at various state legislative and regulatory bodies, like the NC General Assembly and NC Utilities Commission, while jointly collaborating with state agencies. Further, NCSEA remains closely connected with partners to monitor activity relevant to the state at the Federal level.

Our Membership

An NCSEA membership is the best way to stay informed, connected, and engaged in the state's clean energy landscape. We offer a variety of membership options depending on the scope of desired involvement, though regardless of membership level, we remain committed to providing the necessary resources to elevate a member's clean energy pursuits.

Our Work

As the state enters a pivotal time in its clean energy transition, the work of NCSEA has never been more important. Our organization operates under three focus programs to pursue a clean energy economy across North Carolina:

- **Power:** We aim to enable a 100% clean energy transformation of the power sector by opening pathways to outcome attainment through law, regulation, utility business model, and member business models.
- **Energy Optimization:** NCSEA will focus on energy efficiency and demand response strategies to reduce energy use in the built environment. This will affordably reduce energy waste in residential, commercial, and industrial energy end uses.
- **Electric Transportation:** NCSEA strives implement policies and strategies designed to transition the transportation sector to be nearly tailpipe emission free, with energy supply from clean energy by 2035.

Across each of these program areas, NCSEA advocates on behalf of the following clean energy technology sectors: electric vehicles, energy efficiency, energy storage, geothermal, hydropower and marine, smart grid, solar, and wind.. Our decisions are informed by a diverse community of energy industry leaders, utilities, customers, and innovators.
